Diverted from Landfill

40%

STRATEGIES AND RESULTS
Since these were spec homes, they needed to have market appeal - more square footage than the smaller homes in walking distance to downtown. At the same time, they needed to minimize footprint so that the lot would have lots of green space and areas for water infiltration. By building up and taking advantage of the long East/West axis of the lot, each home would have roof space to hold enough solar panels to go net-zero. By creating open floor plans, the small footprints of the homes would be spacious and feel larger. Durability and excellent thermal performance would be addressed through a combination of SIPS & ICFs.

EXEMPLARY PERFORMANCE
The location of our homes, downtown Ann Arbor, contributes significantly to the owners being able to live a low-carbon and healthy lifestyle. The homes are also very tight, and our duct leakage was virtually zero when tested before drywall. Good low-flow water fixtures and recirculating hot water save operational costs, as does the geothermal system. South side windows are 3 times the area of north-facing windows, and an ERV keeps the air fresh when the windows are closed. The HVAC systems in the house would augment that performance and use the least amount of energy for the structure. To the extent possible, the significant non-invasive trees on the lot would be preserved.

LEED™ Facts
723 Spring Street

LEED for Homes Certification Awarded December 2008

Platinum 98%

Innovation in Design 6/11
Location & Linkages 10/10
Sustainable Sites 16/22
Water Efficiency 9/15
Energy & Atmosphere 27/38
Materials & Resources 11/16
Indoor Environmental Quality 17/21
Awareness & Education 2/3

*Out of 136 possible points

PROJECT BASICS
Project Type Single Family
Conditioned Space 4,600 sq ft
Bedrooms 5
Bathrooms 4
Lot Type Previously Developed
Construction Type New Construction

KEYS TO SUCCESS
Geothermal
HRV
ICFs
Sip Roof
- Recirculating Hot Water Systems
- Low Flow Water Fixtures
- Solar Powered Window Blinds

THE LEED FOR HOMES DIFFERENCE

Construction Waste Management Plan YES!
On-Site Performance Tests YES!
Custom Durability Planning Checklist YES!
Third-Party Verified Documentation YES!

About LEED for Homes
LEED for Homes is a voluntary, third-party certification program developed by residential experts and experienced builders. LEED promotes the design and construction of high-performance green homes, and encourages the adoption of sustainable practices throughout the building industry.
